

TECHNOLOGY ADVISORY OVERVIEW FOR BUSINESS OWNERS

Business owners depend on technology to increase scale, reduce costs, and gain competitive advantage. At the same time, technology exposes businesses to new risks that could result in disruption, fines or lawsuits, and reputational damage. Calvetti Ferguson can help you optimize technology investments and risk based on your organization's specific needs.

By starting with an IT assessment, business owners can understand the current state of their IT and security investments and how well they are aligned with achieving stated goals and objectives. From there, our team acts as a trusted advisor to tailor solutions suited to your business.

SETTING THE COURSE: COMPLETING AN IT ASSESSMENT

The Calvetti Ferguson IT assessment helps organizations understand the current state of their IT and security investments and how well they are aligned with achieving stated goals and objectives. The deliverables coming out of the IT Assessment can be used to assess and improve IT and security policies, systems, and processes. To better understand a company's needs, we provide a four-step workshop over the course of two weeks.

The results of the IT assessment can:

- Help businesses identify strengths and weaknesses against the four domains where improvements may be needed
- Inform decisions about IT investments and resource allocation
- Identify training and development needs for IT staff

NAVIGATING NEXT STEPS: OPTIMIZING YOUR IT SYSTEMS

After assessing your business's needs, it is important to identify the next steps in optimizing your IT systems. Calvetti Ferguson offers a variety of technology advisory services and will work with you to apply the right solutions to ensure a safe and effective IT environment.
